⚠ Caution: Physical injury and damage to property! Loss of CE conformity and warranty due to modifications and mounting of privately purchased articles without authority!

Alterations to the vehicle that are not approved by Invacare® and/or do not belong to the standard or optional equipment can

- downgrade vehicle handling to such an extent that the vehicle is no longer controllable,
- restrict functionality to such an extent that this may cause failure of electric/electronic components or become a fire hazard.

Modifications that have not been approved and the mounting of privately purchased articles will lead to the loss of CE conformity, Invacare® will not be liable in the event of physical injury or damage to property.

Expiration of vehicle warranty.

Maintain full efficiency and the safe use of your vehicle, avoid physical injury, damage to property or the loss of CE conformity and warranty by:

- only using original Invacare® spare parts,
- only using installation material of the same quality as the original material,
- never opening electric and electronic components (not even after warranty has expired!),
- never modifying electric, electronic or mechanical components
- never mounting parts obtained from external manufacturers without written approval from Invacare®.

✓ Information: Definitions.

What parts are looked upon by Invacare® as being from external manufacturers and as electric/electronic components?

Among other things, parts from external manufacturers that are subject to approval are:

- All electric and electronic components that are connected to the power supply system of the vehicle, such as seat heating, remotes, signal horns, radios.
- All mechanical mounted parts that change vehicle handling, such as trailed units and seat systems.
- In general mounted parts are not permitted that do not conform with the valid road traffic regulations and may thus also not be mounted on Invacare® vehicles.

Electric and electronic components must not be opened, e.g.:

- Electronics
- Drive motors
- Remotes
- Actuators for electric adjustments, e.g. adjustment of the back, legrests and seat angle.

⚠ Caution: Risk of injury when assembling and dismantling the vehicle!

Before commencing any work, ensure that the vehicle is secure. Please read and follow the valid industrial safety regulations. Carry out maintenance and service work according to the service instructions (available separately) in order to avoid physical injury and damage to property. A tool list, illustrated step-by-step instructions and details of tightening torques, will assist you and show how the vehicle remains, or will remain safe and fully serviceable.

✓ Information: Invacare® addresses and service numbers.

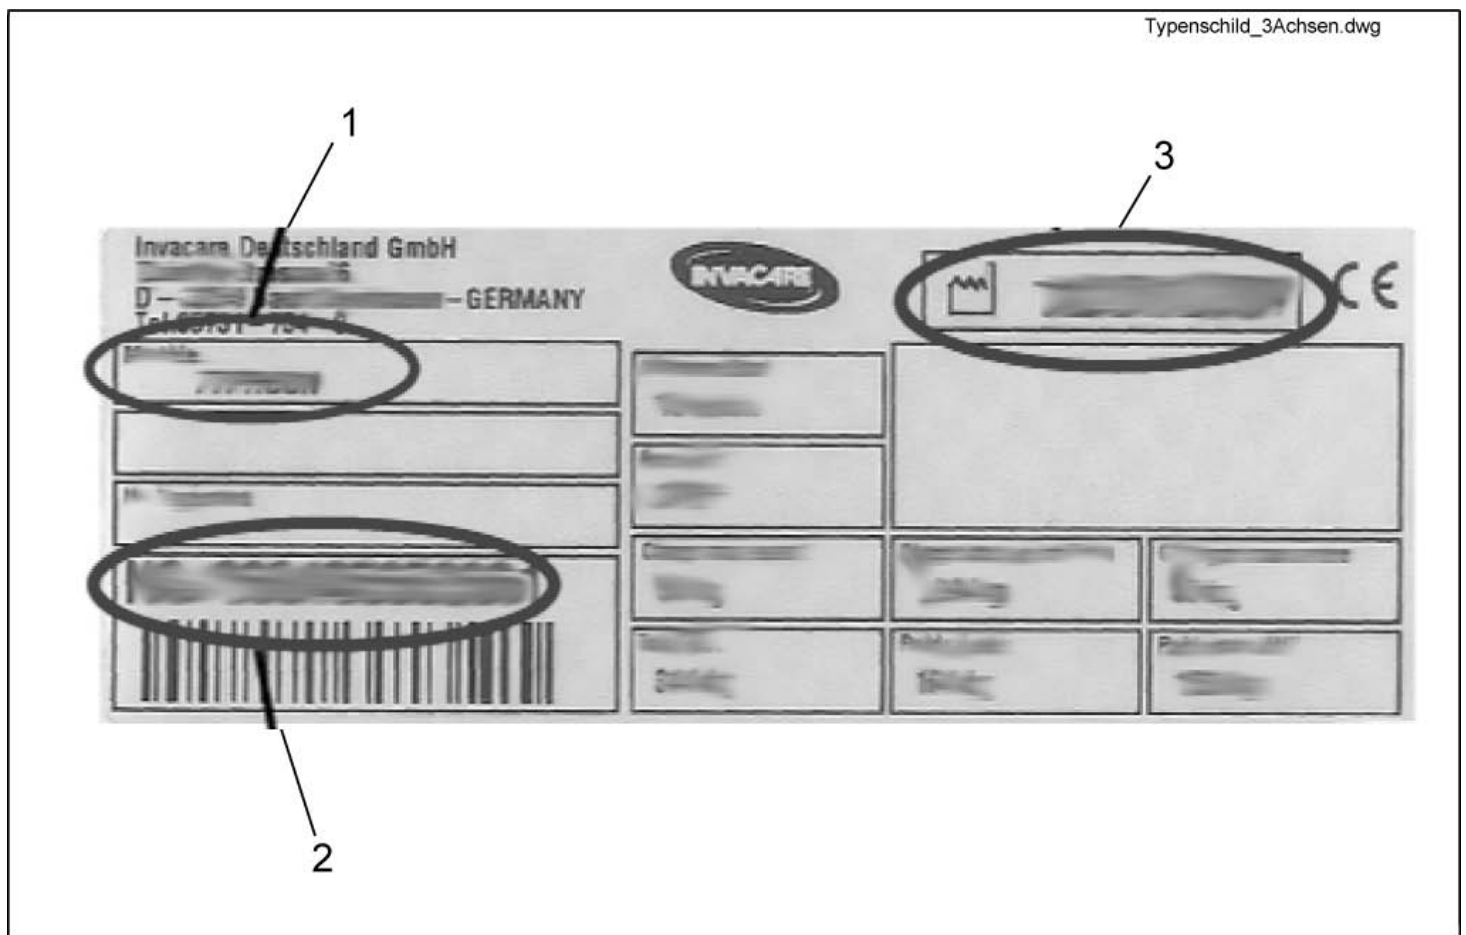

Addresses and service numbers of Invacare® branches can be found in the operating instructions, in the service instructions and on the Internet.

Dataplate

- ✓ You are often only able to find the suitable spare part by using the details on the type plate. The type plate is to be found directly on the chassis.

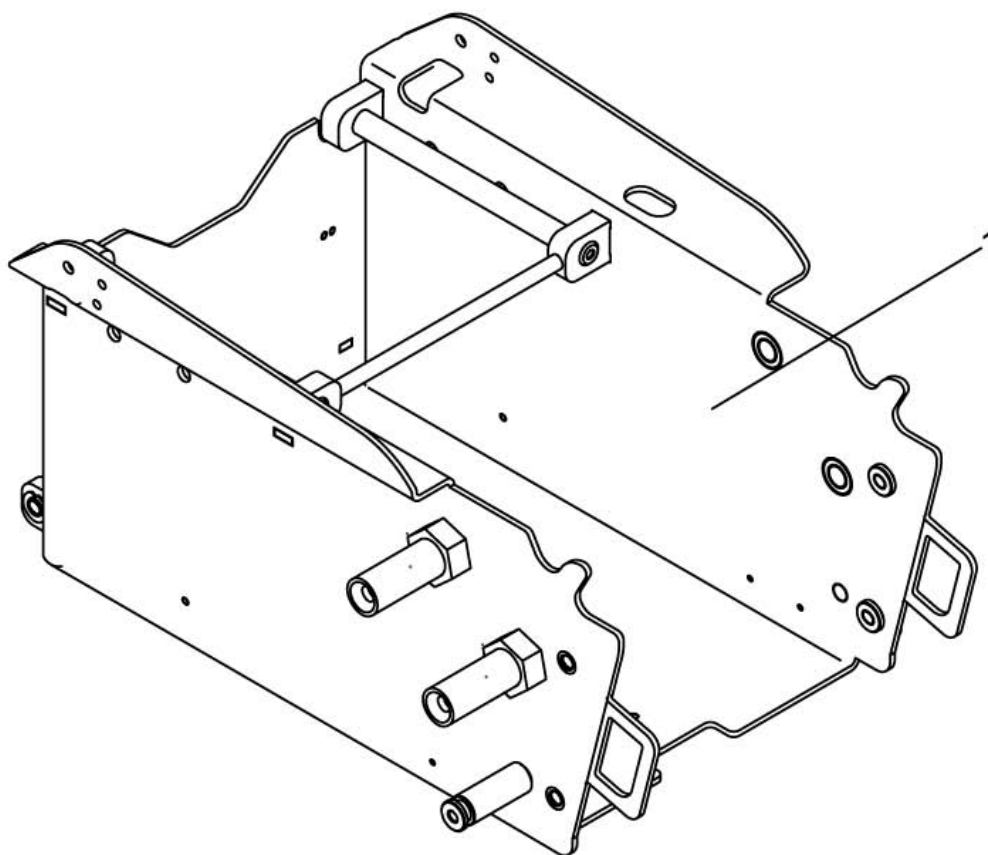

Please quote the serial number, model and year for every order. This helps to prevent misunderstandings.

Wheel Suspension/ Wheels - Crash kit

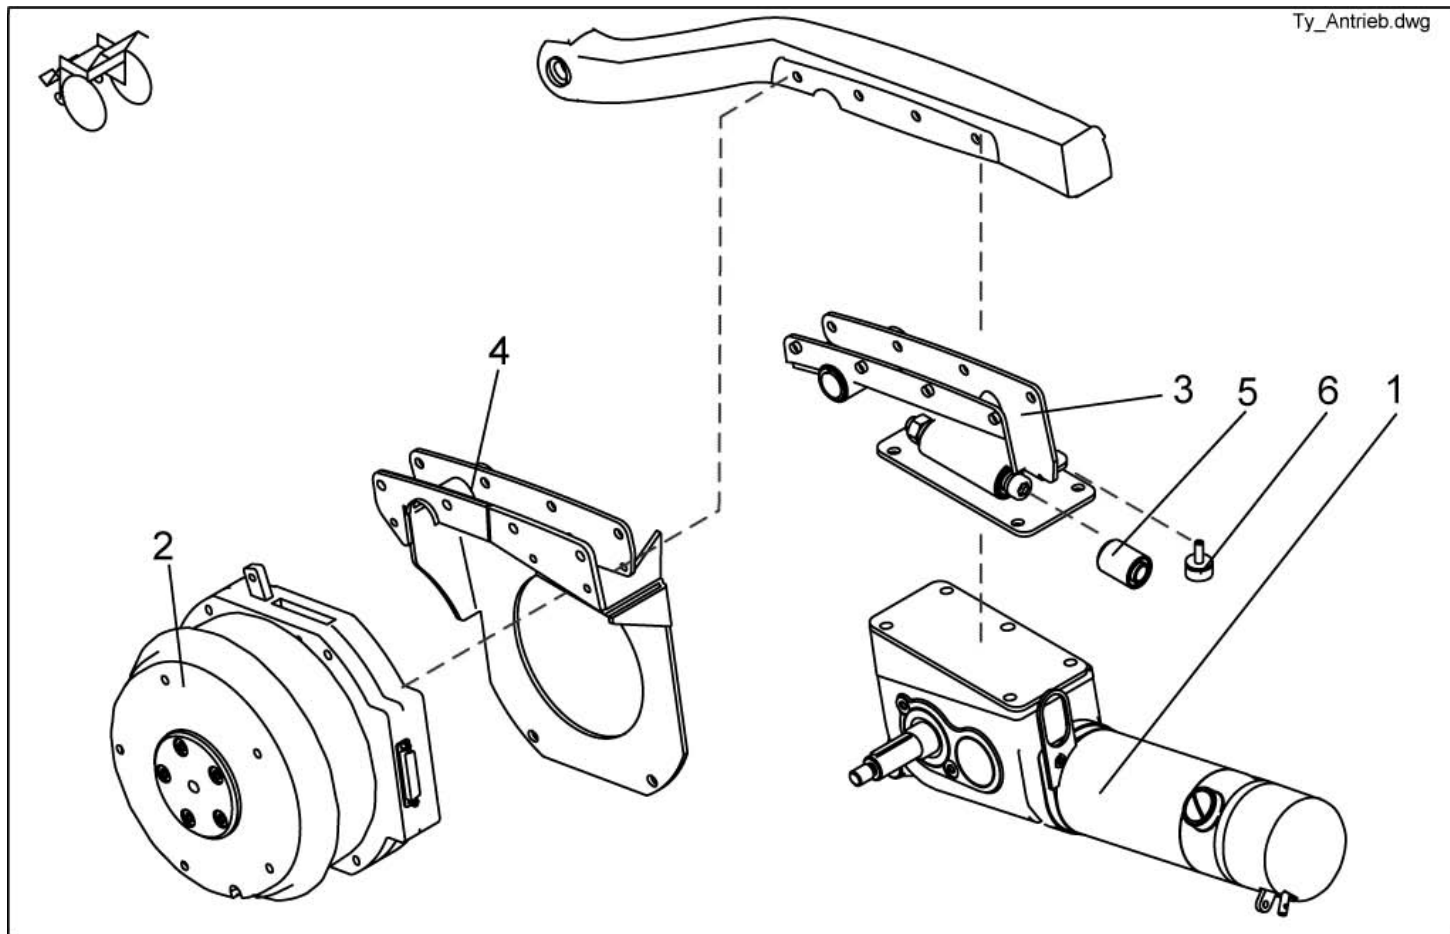

- ⚠ CAUTION: Danger of injury if the wheelchair is not secured properly in the vehicle!**
In order to secure the empty wheelchair in the vehicle, please use the 4-Point-Tie-Down system. Please observe the chapter in the operating instructions on "Transport" for safe handling using the Standard transport system.
- ⚠ CAUTION: Danger of injury if the wheelchair is not secured properly in the vehicle and if the user is not secured properly in the wheelchair.**
If a person is to be transported whilst sitting in the wheelchair you will require the 4-POINT-FIXATION (according to ISO 7176-19:2001) as well as a retaining belt (»»» see chapter on "retaining belts") and a headrest (»»» see chapter on "headrests"). The 4-POINT-FIXATION (according to ISO 7176-19:2001) has passed the test according to ISO 7176-19:2001 in connection with an anchoring system according to ISO 10542, retaining belt and headrest. It can, therefore, only be used in this configuration if the person remains seated in the wheelchair during transport. Please observe the chapter in the operating instructions on "transport" for safe handling using the 4-POINT-FIXATION (according to ISO 7176-19:2001).

Desk/ Tray control

This diagram illustrates the exploded view of a wheelchair seat assembly. The components are numbered 1 through 7:

- 1**: The main seat frame, which is L-shaped with a curved front edge.
- 2**: A small circular fastener or pin.
- 3**: A small cylindrical component, likely a bush or spacer.
- 4**: A long, thin rectangular component, possibly a support bar or cushion insert.
- 5**: A small cylindrical component, likely a bush or spacer.
- 6**: A small rectangular component, possibly a bracket or connector.
- 7**: A control unit with a joystick and several buttons, connected to the seat frame by a cable.

The diagram shows how these parts are assembled. Dashed lines indicate the alignment and placement of the components. A small icon of a wheelchair is shown in the top left corner, indicating the intended use of the assembly.
